## HOLTEC TECHNOLOGY CAMPUS RISING OUT OF THE GROUND

Since the groundbreaking ceremony for the Holtec Technology Campus (HTC) on July 1, 2015 the project has been moving at a rapid pace. It took the Holtec / Joseph Jingoli and Sons construction team 4 months from that ceremony to transform the site of the historic New York Shipbuilding Corporation in preparation for the future – a state of the art campus, a center for technology innovation and manufacturing, employing Camden residents, with the hope of attracting other manufacturing companies to the area. Holtec acknowledges and respects the past as we move into the future.

As you drove across the Walt Whitman Bridge, you may have noticed the first steel erected on October 28, 2015 – HTC rising out of the ground. Today, steel for the 7 story office building is complete and steel for the manufacturing building is over half way complete. We expect the arrival of our heavy lift cranes and erection of the light manufacturing facility to begin this month. We're working toward construction completing during the winter of 2017 and commissioning the facility in June 2018. Holtec looks forward to moving to Camden and being a catalyst for prosperity and change.
